

STONE CARE

TOUCH-UP ETCH REMOVER

FORMULATED FOR

POLISHED MARBLE,
TRAVERTINE & OTHER
CALICITE BASED STONES

MB-11

ETCH
REMOVER

EASY TO APPLY

Works Best On
Lighter Stone

MB-11 Touch-Up is a unique combination of specialty abrasives and catalysts that makes the art of marble polishing relatively easy to implement without the need of any power-tools. **MB-11** is designed for spot polishing of most “water stains” or “rings” from polished marble, travertine and other calcite-based stone.

Be certain to test product first on a spare tile or inconspicuous area for extra caution before use.

DIRECTIONS:

Use rubber gloves when handling this product. Apply approximately 1/8 teaspoon of powder to the dull spot to be restored. Using a spray bottle, spray a mist of water over the powder making sure all the powder is moistened. If you do not have a spray bottle, you can pour a few drops of water onto the powder from a cup. The mixture should be wet paste consistency. Using a clean, slightly moistened white piece of cotton cloth (a washcloth will do fine), rub until the area treated is dry. To finish with a “professional touch”, spray a bit more water to the are being treated, then using the same part of the cloth with product residue, rub in circles (with a little pressure) until the stone surface is dry and shiny. This will make for a perfect blend. Repeat the process if needed. For the final cleaning to eliminate any residue, spray a little MB-5 Stone & More spray cleaner, then rub it dry.

SPECIFICATIONS:

Appearance.....	White Powder
Odor.....	N/D
Specific Gravity.....	N/D
pH.....	6.0
Boiling Point.....	N/D
Flash Point.....	145°F
Water Solubility in Water.....	Slightly
